OUTREACH THROUGH TECHNOLOGY

Outreach through technology is our mission by making the Gospel of Jesus Christ known across the globe through technology solutions; to assist the local church and ministries to do the same using those tools; and to provide service and quality with excellence.

The tithing system OTM has to offer is developed to be an extension to a churches existing CMS or bookkeeping system. There are numerous advantages to this approach. First, tithing records are consolidated back into the existing back end system. Church members and donors can therefore use their existing system to publish comprehensive tithing reports i.e. donations in church plus electronic donations.

The OTM system provides online access to electronic or online tithing information. This information can be viewed by church accounting personnel online. Having access to the records online provides the ultimate flexibility since the information can be used in ways unanticipated on the outset. In addition, the OTM system integrates with churches that have established merchant account for credit card processing. The system currently supports AuthorizeNet and PayPal.

ONLINE TITHING

Web sites are a great tool to help churches raise funds. OTM offers church members the option to:

1. Provide a portal on your website that your patrons can use to securely login and make donations via a customizable form. This information is securely stored at the server until it has been manually retrieved and entered into your bookkeeping software by your accounting staff. At no time is credit card information distributed via email.
2. Provide a portal for your patrons to securely view their donation history. This information is manually uploaded by your accounting staff via an export out of your bookkeeping software. We suggest a monthly upload to keep records fresh.
3. Provides a backend for your accounting staff to download the donation request information from the server and manually enter it into your bookkeeping software.
4. Provides a backend for your accounting staff to upload tithing records from your bookkeeping software (via an export file) to the OTS system.
5. Stores all information on the server, providing a high level of security for your patrons with many layers of assurance that their data is not ever compromised.
